

So Everything Runs Smoothly ...
Innovative Service Solutions for Machines and Equipment

FAG

SCHAEFFLER

**The smoother things run,
the better.**

The perfect machine is one with maximum availability and complete freedom from maintenance. That is why Schaeffler's range of services and maintenance products takes care of everything during operation. This begins with premium lubricants that are optimally matched to your machine.

It continues with intelligent lubricators that ensure that all of the rolling bearings installed in your machine are supplied with lubricant exactly as they need it. And it is rounded out by condition monitoring devices that identify malfunctions long before they are indicated by noises or increased temperatures.

To ensure maximum availability and safety for your machines and equipment.

The perfect maintenance service package for your machine

01 > FAG CONCEPT SERIES

Runs like a well-oiled machine.

The intelligent lubricators in the FAG CONCEPT series supply the correct quantity of grease to different lubrication points in your machine at exactly the right time using individually controlled pump bodies. These lubricators can be connected individually to the FAG SmartQB and are available in FAG CONCEPT2 and FAG CONCEPT8 designs.

02 > FAG ARCANOL GREASE RANGE

Nothing but the best grease for your machine.

ARCANOL premium grease is tested in our in-house laboratories and is characterized by its above-average operating life and high performance capability. It is available for a range of industries and requirements, including special greases, high-temperature greases, and greases for the food processing industry.

03 > FAG SMARTQB

Operational in a matter of minutes

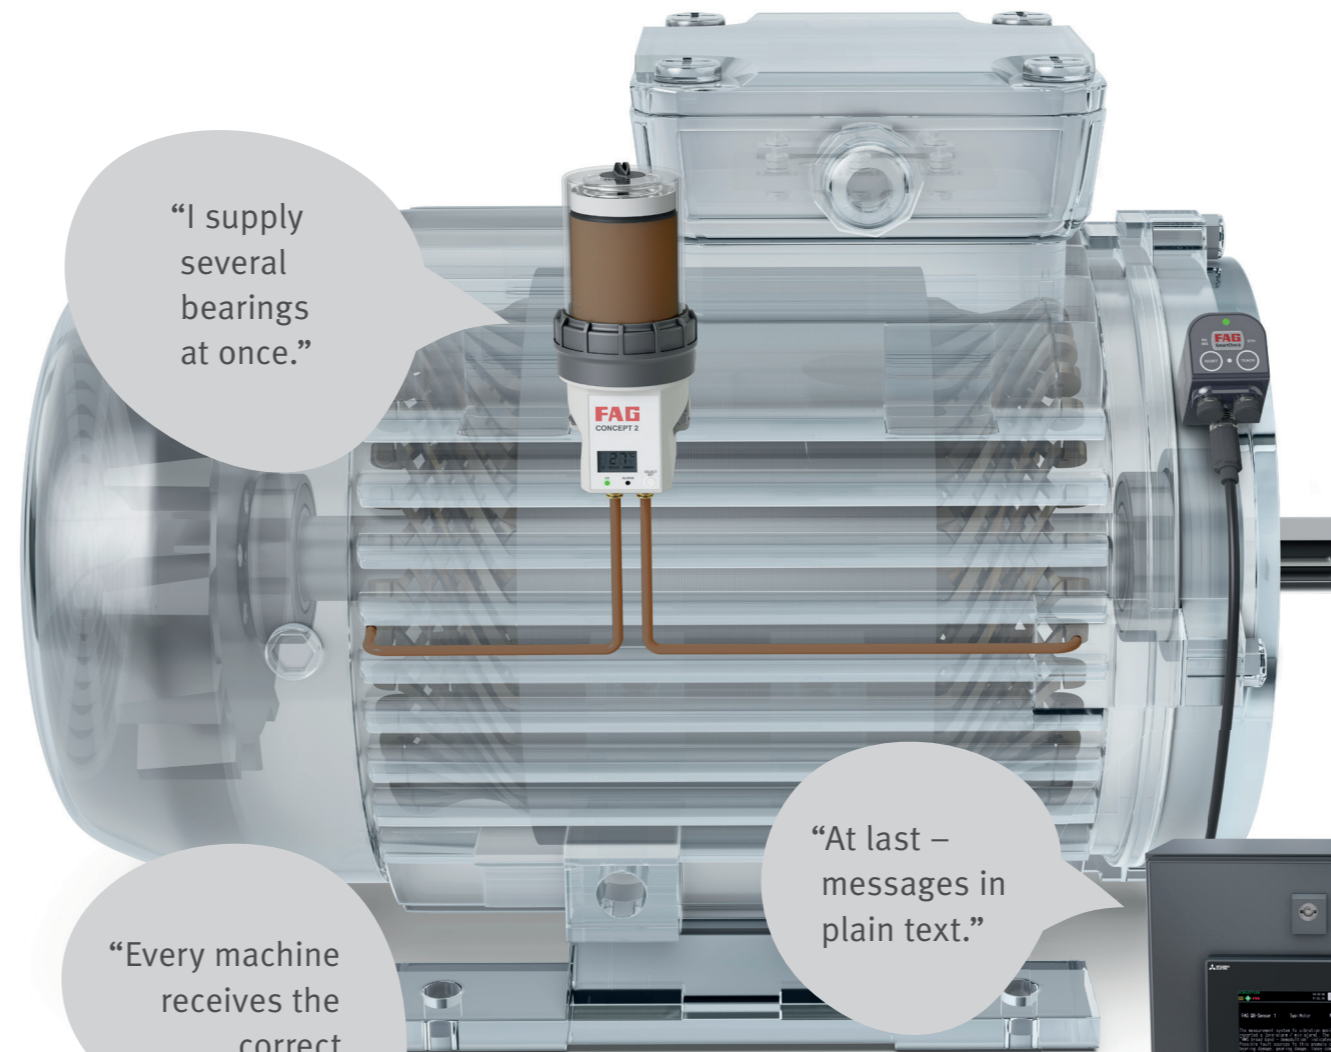

The FAG SMARTQB combines with our greases and lubricators to form the perfect system. Plain text messages provide simple and comprehensible information about the machine's current condition and clearly identify the causes of malfunctions. No special knowledge of vibration analysis is needed.

01 > INTELLIGENT LUBRICATORS

FAG CONCEPT SERIES.
A simple and individually adjustable lubricant supply.

02 > PREMIUM LUBRICANTS

THE FAG ARCANOL GREASE RANGE.
Top-quality greases, developed and tested specifically for rolling bearings.

03 > CONDITION MONITORING

FAG SMARTQB. An easy start in the field of intelligent machine monitoring.

Quality and reliability that work to your advantage.

As a leading worldwide rolling bearing manufacturer with innovative high-performance products, Schaeffler possesses comprehensive systems expertise in the field of mechanical and plant engineering.

But that is not all that Schaeffler has to offer: We provide consultation services for our customers in all aspects of maintenance, including mounting and dismantling, tribology, condition monitoring, identifying weak points, and troubleshooting.

Schaeffler is a partner who is always at your side with a strong team of sales and application engineers. Schaeffler provides consultation and recommended courses of action, and helps you to continuously optimize your machines' availability.

After all, machines are made to run...

Quality

Systems expertise

Safety

Cost savings
